

Garcia Tandela

Software Engineer

Profile

I'm a professional and talented Software Engineer that loves to face new challenges and develop solutions to help the world improve through digital transformation and i have had the privilege of working on projects with companies around the world such as a real estate startup, a digital marketing agency and a project for managing clinics and client relationships (CRM).

Nowadays my main focus is to ensure that projects have a well defined software architecture facilitating teamwork, maintenance, testing and scalability because i love being able to be involved in the entire process of a project dealing with Frontend, Backend, Database and DevOps and also from is elaboration, design and finalization.

Employment History

Software Engineer at Viveendo Bem, Salvador, Bahia, Brazil

March 2020 — Present

I was responsible for creating the platform from scratch to the current stage that it is, defining the ideal software architecture and standards that meet the needs that the project needed, dealing with different technologies, always ensuring a great performance and with time I had other responsibilities in coordinating and managing a small development team, including myself ensuring that activities are delivered and tested within the established deadlines.
